

Remote teaching and learning: Resources to get started

The more things change, the more they don't

As the education experience was disrupted all over the world in 2020, some things remained unchanged. Educators are still passionate about delivering quality experiences for their students. Students want to stay connected with their teachers and classmates while having a sense of purpose and direction in their days. Administrators and IT continue to strive for better resources and support for their teachers and faculty.

As a cornerstone of society, education provides stability and security to so many. None of this has changed. But the way education is delivered is shifting.

A move to remote teaching and learning can empower schools to maintain their missions. For most schools, however, getting started can be overwhelming.

Here we've collected some of our best resources—including instructional guides, online courses, and webinars—to help make your remote teaching and learning a success.

Drive a fast transition to inclusive online learning

Many schools are making the shift to remote learning for the first time, sometimes under very urgent circumstances. Microsoft Education provides the strategies, resources, and technology to quickly create online, inclusive classrooms.

Shift to distance learning: A 5-day guide for school leaders

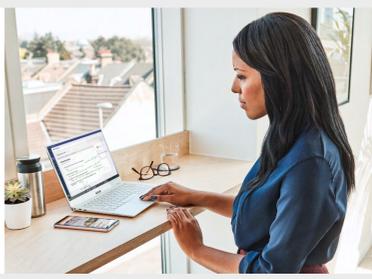

Includes instructions for setting up Office 365 and Teams, training teachers and students, and running online classes.
